

MATHS HOMEWORK 1.2.18

Finding the Perimeter

On the attached sheet you will find some different shapes. Your task is to measure each side and work out the perimeter of each shape.

Remember:

Make sure you have measured every side of the shape before you work out the perimeter. If it helps, tick off each side as you measure them so that you don't forget any sides or measure the same side more than once.

Set your work out just as we have done in class. Write out your sum and then the answer. Don't forget to write 'cm' as well!

As an extra challenge, can you say which shapes are polygons and which ones are not?

Regular and irregular 2D shapes (I)
